

COUGHING, SHORTNESS OF BREATH, WHEEZING, YEARS OF SMOKING

A worldwide research study is now underway to test an investigational drug for chronic obstructive pulmonary disease COPD, also known as smoker's cough, chronic bronchitis, or emphysema.

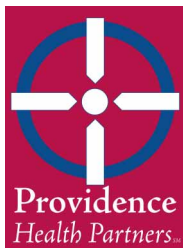

You may be eligible to participate in this study if you:

- Are 40 years of age or older
- Have a diagnosis of COPD
- Are a current smoker or were a smoker in the past

In addition to receiving study-related physical exams and laboratory services at no charge, participants will receive study medication and will be monitored by a medical research team, including the study physician.

Ask your doctor if this study is right for you.
